CELLS

Other parameters
Age, Pressure, Cell contacts and Membrane flexibility

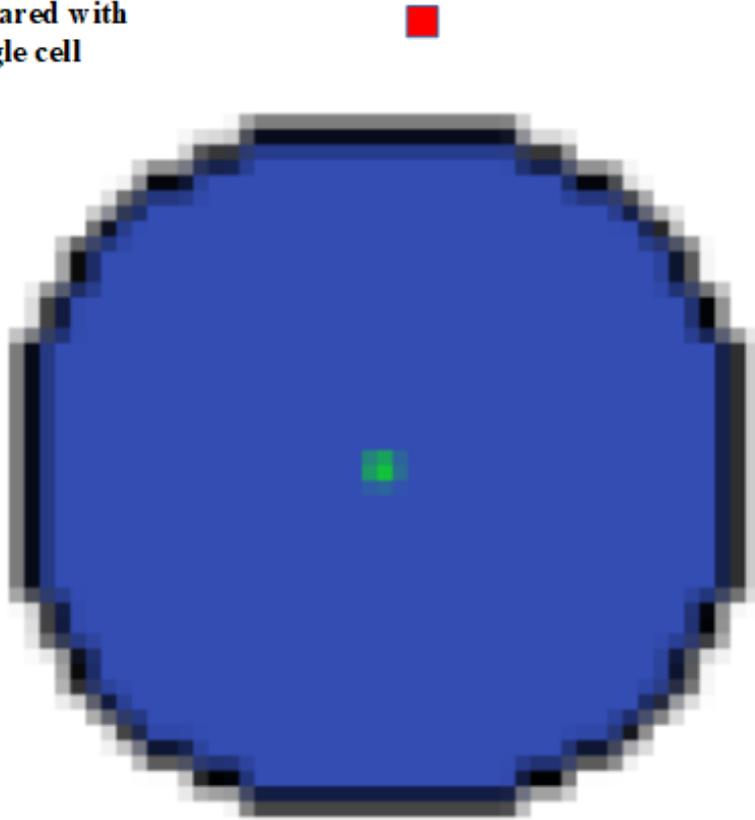

CELL	
Properties	
Name	Cell2
Color	■ #e64d4d
Radius	<input type="range" value="13"/>
Mobility	<input type="range" value="50"/>
New Behavior	
OK	Signal <input checked="" type="checkbox"/>
OK	Chemotaxis <input checked="" type="checkbox"/>

GRAINS

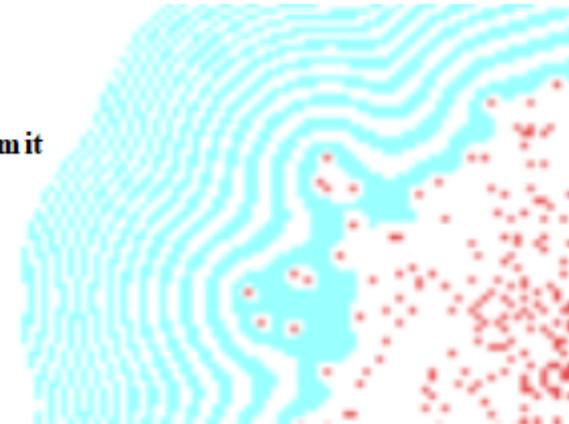

A cell can produce and consume grains

A grain as compared with a single cell

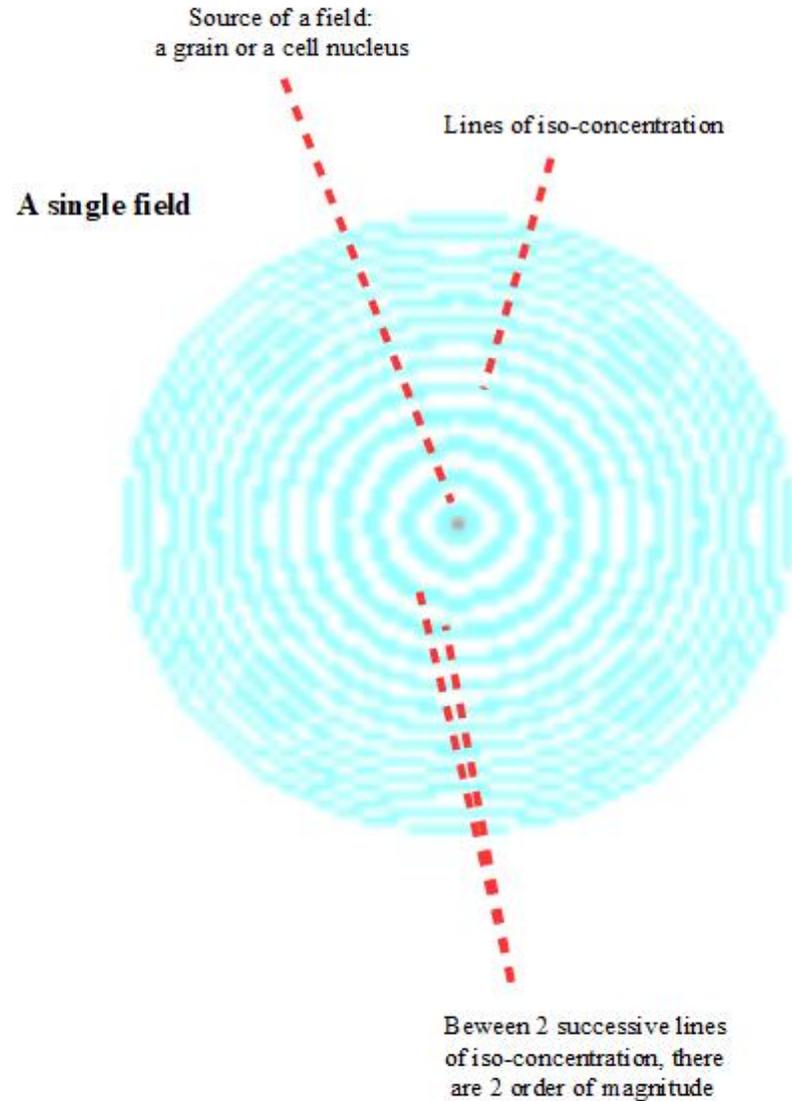

Grains can, like cells, emit signals.

Grains have roughly the same abilities as cells: signalling, migration, division, deletion, differentiation, transformation (grain => cell or cell => grain).

The behaviours are described using the same graphical manner.

FIELDS

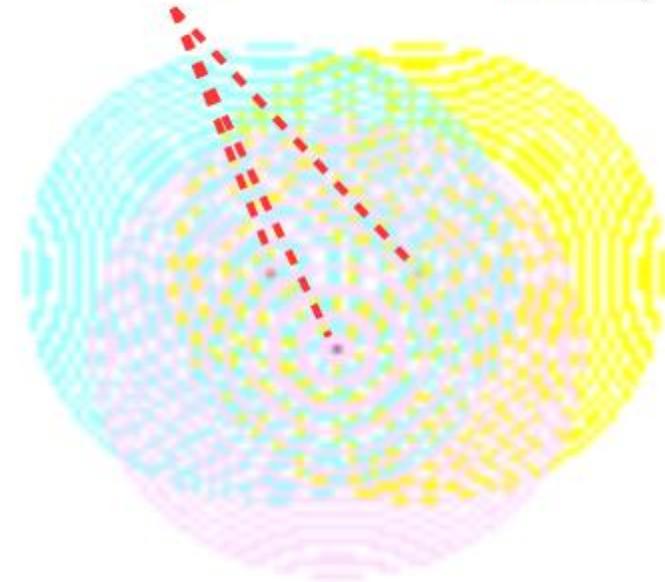

A field has:

- a concentration per matrix element,
- a diffusion rate and
- a degradation rate

3 sources of field

Independent fields can overlap.

Cells and grains use fields

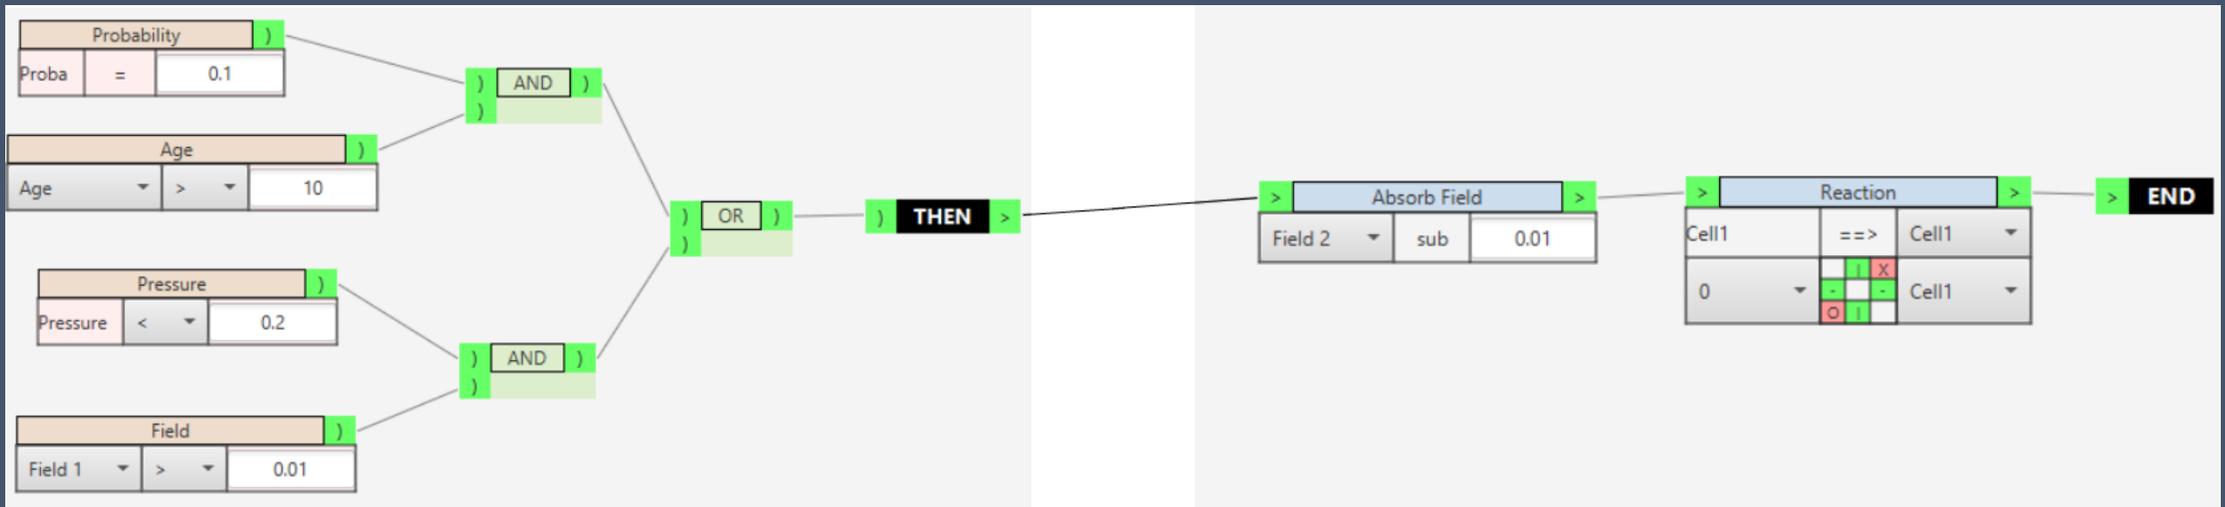

The fields can be detected by grains or cells to differentiate, move, divide or die.

Behaviours

Conditions

Logical gates

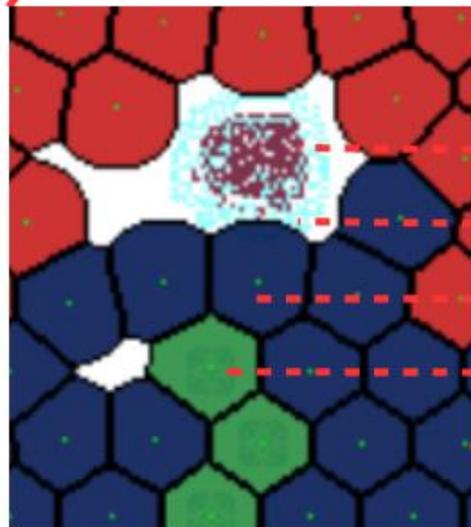

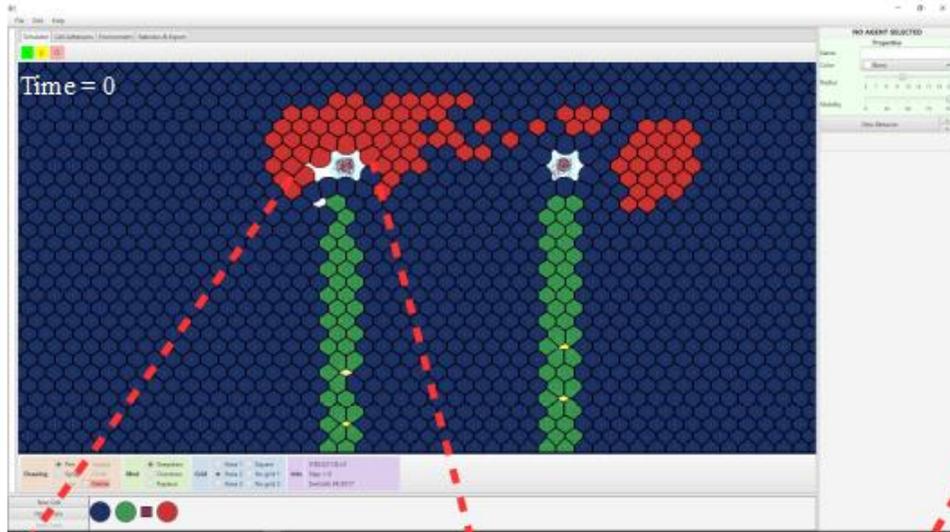

Actions

=> OpenCL code generation

PROSTATE EXAMPLE

Simulation of the prostate tissue inflammation after surgery.

Cancerous cells

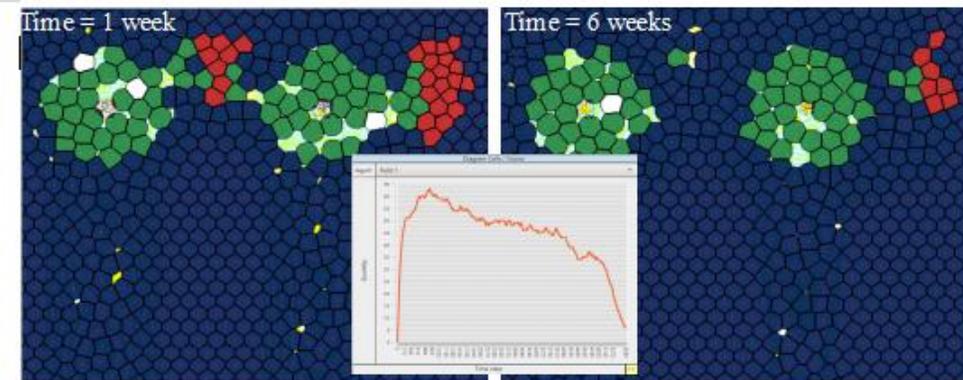

Radio active grains

Radio active field (2)

Inflammation field (1)

damaged cells

Healthy cells

Probability	=	0.01	AND	THEN	Reaction	END
Proba	=	0.01			Tumeur ==> Tumeur	
Pressure	<	0.2			0 Tumeur	

Field	>	1.0E-15	THEN	Reaction	END
Field 2	>	1.0E-15		Tumeur ==> Prostate InflammÃ©e	
				* Tumeur	

Probability	=	1.0	THEN	Put Field	END
Proba	=	1.0		Field 2 add 0.01	

Probability	=	0.001	THEN	Reaction	END
Proba	=	0.001		Grain Radioactif ==> 0	
				* Tumeur	

Probability	=	1.0	THEN	Put Field	END
Proba	=	1.0		Field 1 add 0.01	

Probability	=	0.01	THEN	Reaction	END
Proba	=	0.01		Prostate InflammÃ©e ==> 0	
				* Tumeur	

Field	>	1.0E-7	THEN	Reaction	END
Field 2	>	1.0E-7		Prostate ==> Prostate InflammÃ©e	
				* Tumeur	

Pressure	<	0.01	THEN	Reaction	END
Pressure	<	0.01		Prostate ==> Prostate	
				0 Tumeur	

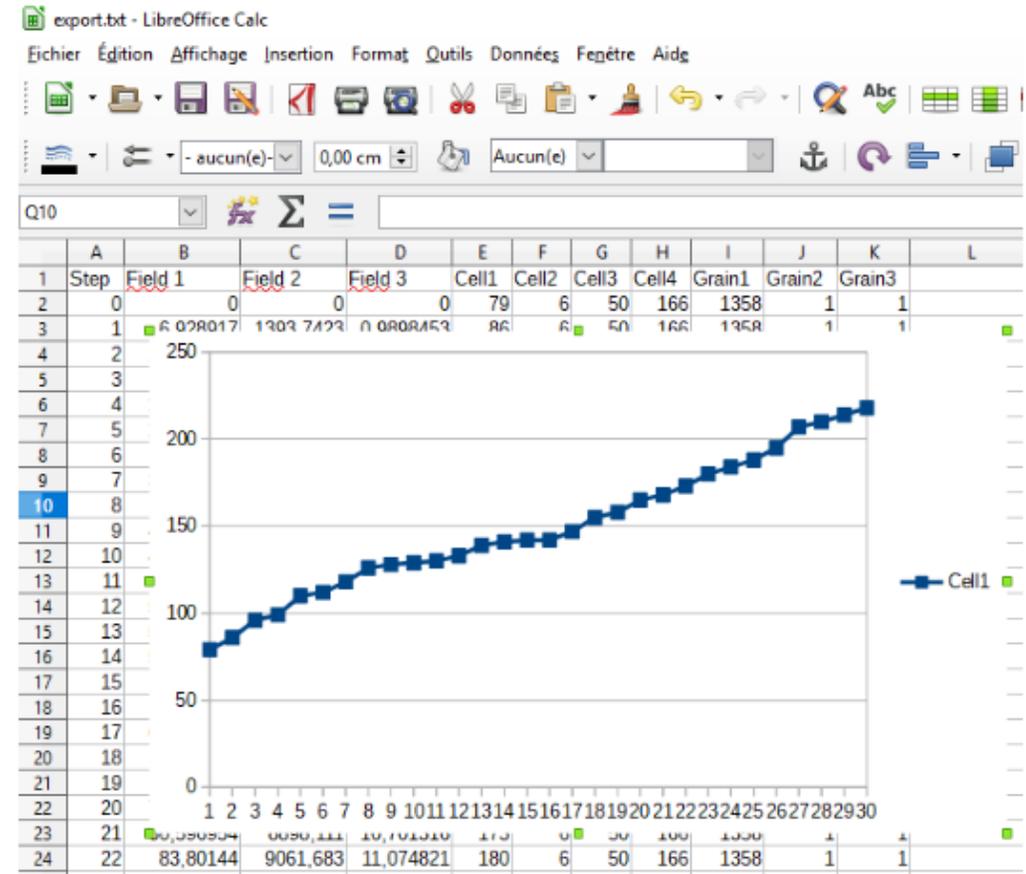

DATA EXPORT

The data can be exported in text format and imported in any spreadsheet software.

export.txt - Bloc-notes

Examples

- Download SimCells => <http://virtulab.univ-brest.fr>
- Unzip, go in the folder `bin` => double click `SimCell.bat`

- Multicellular simulations
 - Division
 - Contact
 - Apoptosis
 - Migration
 - Membranar adhesivity
 - Different sizes
 - Mecanotransduction
- Microscopic images integration

Conclusion

- Fully Integrated Dev Software
- Focus on *what* instead of *how* (with limitations)
- 4 scale levels (Cells, Grain, Molecule, Fields)
- Many entities can be simulated (>1 million)
- Used in teaching at Brest (High school, M1 & M2 Bio, M2 Info, 4A Medical school)
- Used in research (next talk)
